

Schematic Pack for Digi Embedded Modules

Scope:

The delivered schematic is intended to be a reference schematic and can be used as a base for customer specific designs. There are no guarantees, that further modules will be exactly compatible to these schematics, but they will comply to the module specification.

Drivers supplied in the development Kit, are designed for the module specification and generally work with this version of the schematic. However the schematic could have building options not available in a module, and the availability of that hardware option does not imply, that software can drive all the hardware options.

This information is supplied under a customer NDA. It is considered Authorized use of the schematic pack to create customer specific derivative work. Publication or redistribution of the original schematics is not authorized.
